Inhoud

In today's world, economies are not growing as envisaged in the past. For many organizations growth has become slower than expected, inputs costs are on the rise, profit pressure is mounting. In order to deliver shareholder value and remain profitable, most companies are now thus embarking on the path of transformation.

Transformations can be growth led or cost led, or can be a combination of the two. That is for the organization to decide, based on their strategy & vision. However, research shows that while 70% of the organizations are going into transformation, almost 65% of them fail. These transformations do not fail due to lack of tool or technology, they often fail due to lack of vision, lack of leadership, lack of planning and faulty execution.

Doelstelling

Purpose

There are plenty of academic theories on how to transform... they are useful but what they lack is inclusion of practical tips and tools that can help you start leading a transformation and achieve measurable results that will enable your organisation to deliver on its strategic goals.

This Finance Transformation masterclass will provide you with a clear understanding of steps to be taken, using the grand old 5W1H method (Who, What, Where, When, Why & How) and use cases from various sectors to enhance your understanding and knowledge of how to lead a transformation program.

Transform your finance function step by step through careful planning & flawless execution.

Inhoud
